Highlights

- End-to-end 0→1 delivery:** solo through research → process mapping → product design → full-stack build → deployment.
- Full-stack development:** proficient in React / Node.js / Python; translate business needs directly into technical solutions, cutting PM-engineer handoff friction.
- Hands-on AI application:** deep use of frontier models (Claude / GPT / Gemini / DeepSeek / MiniMax); practical experience in model selection, AI workflow design, and agent configuration.
- Deep AI understanding:** grasp each model's capability boundaries and cost structure; judge AI fit for business scenarios. Lived through AI's arc from chat → coding → agent → ecosystem.
- Strong execution & self-drive:** goal-oriented; skilled at decomposing complex tasks and pushing them forward.

Education

University of Queensland MSc, Interaction Design · School of Computer Science 2023.02 – 2025.11

- QS Top 50 · Group of Eight; core courses: Web full-stack (React / Django), Physical Computing, Human-Computer Interaction (HCI).
- Full product-delivery capability from user research and interaction design to full-stack build; both Team-Lead capstones delivered at Distinction / High Distinction.

Binhai College of Nankai University BA, Marketing 2018.09 – 2022.07

- Core: market research, consumer psychology, management, organizational behavior; merit scholarship and honors-student recognition.

Experience

Indie AI Builder Independent 2025.12 – Present

- Built and continuously iterate a multi-agent system (OpenClaw) around real personal needs (health, job search, learning, content), exploring how agents can take over daily workflows.
- Continuously benchmark frontier models (Claude / GPT / Gemini / DeepSeek / MiniMax / GLM) into selection judgments; daily heavy use of Claude Code and Codex for full-stack development and complex tasks.
- Built a cross-device local AI workflow — multiple Macs sharing one memory / knowledge base over P2P, so agents collaborate without losing context.
- Distilled a traditional sales firm's core business SOP into reusable AI workflows / Skills, exploring agent-based replacement of repetitive manual data work.
- Shipped multiple 0→1 deliveries solo: portfolio liuyikai.com (Next.js + CI/CD), a chemical-sales visualization system, and more.

XPENG Motors | North China Zone 2 | Regional Marketing Lead (Intern) 2021.06 – 2022.12 · Tianjin

- Scope:** full ownership of market expansion and operations across North China Zone 2 (Tianjin / Shandong / Hebei / Liaoning).
 - Expansion & partnerships:** led regional outreach and cross-industry resource integration; coordinated auto-show liaison and external support.
 - Activation & conversion:** planned and ran customer-retention and sales-conversion campaigns that directly supported sales.
 - Standardization & new media:**
 - Owned brand-display standardization across regional stores.
 - Managed store Douyin accounts and content quality.
- Achievements:**
 - Brand IP:** co-led planning and end-to-end execution of core brand IPs ("Pengyou Club", "Sunset Café", "Weekend Arts"), lifting regional brand voice and engagement.
 - New-media growth:** ran the Tianjin Douyin matrix with solo script / shoot / edit; led the "Tianjin Airport XPENG Store" account to **+13K precision followers in 2 months**.
 - Auto shows:** lead liaison for Tianjin Auto Show (A-tier) and Shenyang Auto Show (B-tier), ensuring high-standard delivery.
 - High cadence:** monthly ~4 sales-conversion + 4 customer-retention + 1 cross-industry campaign, supporting regional sales targets.

Projects

Memory Future Simulator UQ DECO3801/7381 · ~12 wks · 6-person team

Team Leader + PM + Front-end

- **Background:** a speculative-design brief — use interaction to involve the public in memory-ethics discussion; traditional one-way formats lacked any way to "experience the consequences of a choice."
- **Work:**
 - **Product direction:** pivoted from a "static educational tool" to a "multiplayer collaborative narrative simulator" — scan-to-join one shared world, collective decisions, real-time social impact.
 - **Project management:** ran 3 Sprints in Jira, weekly stand-ups + daily async Slack; core liaison between the team and the supervisor.
 - **User testing:** ran 2 rounds of Think-Aloud (5 users), driving 3 Sprint iterations.
 - **Front-end:** built with React + Vite + TailwindCSS; owned core pages and front-end integration.
- **Result:** Distinction (6/7); team rated "Exceeds Expectations"; exhibited all-day at the campus showcase.

Smart Library Thermal-Perception System UQ DECO7285 · ~12 wks · 6-person team

Team Leader + PM + Front-end

- **Background:** the open study space had a "thermal micro-climate" problem — large temperature gaps across one floor, students constantly switching seats. Interviews revealed the real issue wasn't "temperature control" but "temperature information being invisible."
- **Work:**
 - **User research:** led semi-structured interviews + Contextual Inquiry; distilled insights via affinity diagramming.
 - **Key decision:** since the library temperature couldn't be changed, redefined the button from a "control tool" to a "feeling-record" device — reframing the product's value.
 - **User testing:** Think-Aloud + Day Reconstruction; identified and fixed 8 core experience issues.
 - **Build & coordination:** React for both large-screen and mobile UIs; coordinated three technical domains — hardware (ESP32 sensors) and backend cloud services.
- **Result:** High Distinction (7/7, full marks), from proof-of-concept to a deployable product; exhibited all-day at the UQ campus showcase.

AI Practice & Insight · From Tool User to Tool-chain Builder Personal, ongoing

2026.02 – Present

- **Core insight:** today's agents aren't omniscient assistants but "scenario-bound routers" — give one a scenario knowledge base + SOP and it solves a specific problem with low hallucination; accordingly, kept Claude Code as the workhorse and OpenClaw as a mobile entry.
- **Three-tier setup:** OpenClaw (mobile entry — logging & commands) → shared vault (unified memory) → Claude Code (daily Inbox scan, complex tasks), all on one shared base.
- **Model-selection methodology:** continuously benchmark Claude / GPT / Gemini / DeepSeek / MiniMax / GLM across context, multimodality, cost, and generation to decide "which model for which scene."

Chemical Sales Regional Data Platform Chemical-trading firm · ~7 days · Solo

PM + Full-stack

- **Background:** invited to build a sales-management tool for a chemical-trading firm (soda ash / urea / baking soda; 5 zones, 31 provinces). Sales data lived in manual Excel; management had no unified view, stale updates, and no visual decision support.
- **Work:**
 - **User research:** in-depth talks with the sales team to map org structure, data flows, and special rules (e.g., Inner Mongolia split by city across zones).
 - **Requirement call:** decided against a heavy ERP in favor of a "simple, intuitive" lightweight tool, keeping Excel import to lower the adoption barrier.
 - **Product design:** national sales heat-map → customer-management backend → Excel batch import with validation.
 - **AI-assisted build:** defined requirements and rules, owned architecture and QA, implemented with AI — validating a PM + AI workflow.
- **Result:** from research to production in 7 days; piloted by the internal sales team; management gained its first unified national sales view.

Skills

Tech Stack

React · Vite · TailwindCSS · Node.js · Python (Django) · PostgreSQL

AI Tools

Claude Code · Codex · Cursor · Antigravity · OpenClaw · n8n; heavy use of Claude / GPT / Gemini / MiniMax / DeepSeek

Design & Collab

Figma · Notion · Jira · Slack · Lark · Miro · Microsoft 365 · Google Workspace

Media

FCPX · DaVinci Resolve · Commercial Photography
